Le Colibri

Simplicity can be so fascinating.

For many years now, Bosse modul space – the classic tubular furniture system – has combined form, function and endless possibilities.

The simple idea originated in the Bauhaus era, a period which shaped architecture and interior design. A system of chrome tubes, variable in terms of width, height and depth, attached using only enclosed chrome connectors and with high-quality wooden or glass panels in between.

Sideboards, shelving units, tables, counters, cupboards and much more can be created. The possibilities are endless.

Le Corbusier – architect, interior designer, furniture designer, painter visionary.

Le Corbusier (1887–1965) is regarded as one of the most renowned architects of his time. Indeed, his ideas and thoughts inspire the world of architecture to this day. Along with others, he shaped the Bauhaus era. And he was more than just an architect – he was also an interior and furniture designer and a painter with an enormous creative urge.

Le Corbusier was fascinated by the effect of architecture, the room and the resulting atmosphere. The world-famous Villa Savoye in Poissy, France, impressively illustrates his "5 points for a new architecture": pilotis (concrete pillars), roof garden, free layout, free façade, long windows.

Polychromie Architecturale.

With "Polychromie Architecturale", Le Corbusier invented an ingenious colour system based on his own colour effect principles. The 63 harmonious shades are inspired by nature and can be combined in any way. All colour groups and shades have their own individual relevance and embody specific spatial and human effects.

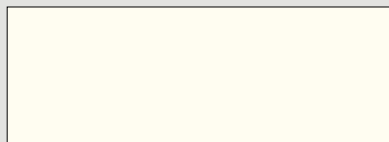

Le Corbusier's colour effect principles:

1. Colour modifies the room.
2. Colour classifies objects.
3. Colour has a psychological effect on us and reacts strongly to our sensibilities.

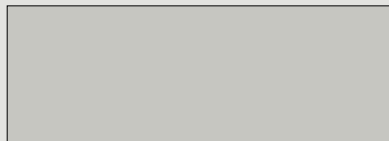

VIVE LA COULEUR!

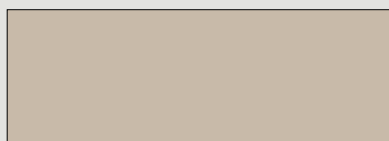

BOSSE MODUL SPACE WITH LE CORBUSIER'S
